

Best Paper Awards

Each year the Design, Automation and Test in Europe Conference presents awards to the authors of the most outstanding papers of the previous year's conference. The selection is performed by an award committee, based on the results of the reviewing process, the quality of the final paper and the quality of the presentation.

The paper selected as the most outstanding in the field of Embedded Software:

Compositional Specification of Behavioral Semantics

by Kai Chen, Motorola Labs, USA

and

Janos Sztipanovits and Sandeep Neema, Vanderbilt University, USA

The paper selected as the most outstanding in the field of Design Methodologies is:

Statistical Blockade: A Novel Method for Very Fast Monte Carlo Simulation of Rare Circuit Events, and its Application

by Amith Singhee and Rob Rutenbar, Carnegie Mellon University, USA

Congratulations to the winners!
